

**PUDUCHERRY TECHNOLOGICAL UNIVERSITY**  
**PUDUCHERRY–605014**

(A Technological University of Government of Puducherry)

**Curriculum and Syllabi  
for  
M.Tech. (Product Design and Manufacturing)**

(With effect from Academic year 2020-21)

(Approved in Sixth Academic Council Meeting held on 20<sup>th</sup> March 2021)

### PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

Program Educational Objectives (PEOs) are broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve. They are consistent with the mission of the Institution and Department. Department faculty members continuously worked with stakeholders (local employers, industry and R&D advisors and the alumni) to review and update them periodically. The curriculum of M.Tech. (Product Design and Manufacturing) is designed to fulfill the Programme Educational Objectives (PEO) and Programme Outcomes (PO) listed below:

|             |   |
|-------------|---|
| <b>PEO1</b> | Expertise in the field of Product Design and Manufacturing suit to technological enterprises, companies, organizations and industries both at national and international levels ( <b>Eminence in Product Design and Manufacturing</b> )                                   |
| <b>PEO2</b> | Inquisitive spirit to elicit creative and innovative outcomes through constructive efforts and analytical research in the field of Product Design and Manufacturing ( <b>Research and Development</b> )   |
| <b>PEO3</b> | Nurturing enthusiasm for the subject of interest and provide solid ground to respond to a lifetime of career challenges and changes through lifelong learning ( <b>Passion for higher education</b> )   |
| <b>PEO4</b> | Exhibit professionalism with greater responsibility in precise product design and exercise leadership-trait in realizing the products through advanced manufacturing techniques with concise qualities and values ( <b>Professional ethics and leadership qualities</b> ) |
| <b>PEO5</b> | Receptive to new technologies, skills, values, and actions for social, environmental and economic sustainability ( <b>Sustainable development</b> )   |

### PROGRAMME OUTCOMES (POs)

|            |  |
|------------|--|
| <b>PO1</b> | Carryout independent research/investigation and development work to solve practical problems ( <b>Enhancing Research Capability</b> )  |
| <b>PO2</b> | Write and present a substantial technical report/document ( <b>Enhancing Presentation Skill</b> )  |
| <b>PO3</b> | Demonstrate a degree of mastery over product design and manufacturing at a level higher than the bachelors program ( <b>Mastery over the field of study</b> )  |
| <b>PO4</b> | Able to use state of art tools and techniques to model and analyze the product components and systems ( <b>Enhancing modeling and analyzing capabilities</b> )   |
| <b>PO5</b> | Solve the challenges in the field of Product Design and Manufacturing through Design, development and evaluation of product components and systems ( <b>Facing real world problems</b> )   |
| <b>PO6</b> | Inculcate lifelong learning practice to acquire excellency in professional, ethical, legal, safety, sustainable, environmental and societal aspects of Product Design and Manufacturing. ( <b>Professional development through lifelong learning</b> ) |

## CURRICULUM

### **Distribution of Credits among the subjects grouped under various categories:**

Courses are grouped under various categories and the credits to be earned in each category of courses are as follows:

| Sl. No. | Category  | Credits    | Course Category Code (CCC) |
|---------|---|------------|----------------------------|
| 1       | Programme Core Course                                 | 24         | PCC                        |
| 2       | Programme Specific Elective Courses                   | 15         | PSE                        |
| 3       | Open Elective Courses                                 | 03         | OEC                        |
| 4       | Professional Activity Courses (Project Work, Seminar) | 28         | PAC                        |
| 5       | Mandatory Audit Courses                               | Non Credit | MAC                        |
|         | <b>Total</b>  | <b>70</b>  |                            |

### Semester-wise Courses and Credits

#### **Semester I**

| Course Code | Course                          | CCC | Periods |   |           | Credits   |
|-------------|---------------------------------|-----|---------|---|-----------|-----------|
|             |                                 |     | L       | T | P         |           |

| AD2NN       | Audit Course - II               | MAC | 2       | 0 | 0         | 0         |
|             | <b>Total</b>                    |     |         |   | <b>25</b> | <b>19</b> |

**Semester III**

| Course Code  | Course                          | CCC | Periods   |   |    | Credits   |
|--------------|---------------------------------|-----|-----------|---|----|-----------|
|              |                                 |     | L         | T | P  |           |
| MEZNN        | Programme Specific Elective - 5 | PSE | 3         | 0 | 0  | 3         |
| OE2NN        | Open Elective                   | OEC | 3         | 0 | 0  | 3         |
| ME272        | Dissertation – Phase I          | PAC | 0         | 0 | 20 | 10        |
| <b>Total</b> |                                 |     | <b>26</b> |   |    | <b>16</b> |

**Semester IV**

| Course Code  | Course                  | CCC | Periods   |   |    | Credits   |
|--------------|-------------------------|-----|-----------|---|----|-----------|
|              |                         |     | L         | T | P  |           |
| ME273        | Dissertation – Phase II | PAC | 0         | 0 | 32 | 16        |
| <b>Total</b> |                         |     | <b>32</b> |   |    | <b>16</b> |

**Total Credits: 70**

**Audit Courses (MAC)**

|              |   |
|--------------|---|
| <b>AD201</b> | English for Research Paper Writing (HS) |
| <b>AD202</b> | Disaster Management (CE)                |
| <b>AD203</b> | Value Education (HS)                    |
| <b>AD204</b> | Constitution of India (HS)              |
| <b>AD205</b> | Pedagogy Studies (HS)                   |
| <b>AD206</b> | Stress Management by Yoga (HS)          |

**Open Elective Courses (OEC)**

|              |  |
|--------------|--|
| <b>OE201</b> | Business Analytics (IT)                      |
| <b>OE202</b> | Industrial Safety and Maintenance (ME)       |
| <b>OE203</b> | Operations Research (ME)                     |
| <b>OE204</b> | Cost Management of Engineering Projects (CE) |
| <b>OE205</b> | Composite Materials (PH)                     |
| <b>OE206</b> | Waste to Energy (CE)                         |

**Programme Specific Electives (PSE):**

|                |              |   |
|----------------|--------------|---|
| PSE-1/PSE -2   | <b>MEZ21</b> | Advances in Casting and Welding                   |
|                | <b>MEZ22</b> | Computer Aided Design                             |
|                | <b>MEZ23</b> | Advanced Solid Mechanics                          |
|                | <b>MEZ24</b> | Tool Design                                       |
|                | <b>MEZ25</b> | Composite Materials Technology                    |
|                | <b>MEZ26</b> | Finite Element Method                             |
|                | <b>MEZ27</b> | Hydraulics and Pneumatics                         |
|                | <b>MEZ28</b> | Integrated Materials Management                   |
| PSE -3/PSE - 4 | <b>MEZ29</b> | Design for Manufacture and Assembly               |
|                | <b>MEZ30</b> | Principles of Maintenance and Safety Engineering  |
|                | <b>MEZ31</b> | Principles of Tribology and Surface Engineering   |
|                | <b>MEZ32</b> | Logistics and Supply Chain Management             |
|                | <b>MEZ33</b> | Computer Aided Inspection and Quality Control     |
|                | <b>MEZ34</b> | Rapid Manufacturing Processes                     |
|                | <b>MEZ35</b> | Industrial Design                                 |
|                | <b>MEZ36</b> | Nanotechnology                                    |
| PSE - 5        | <b>MEZ37</b> | Industry 4.0                                      |
|                | <b>MEZ38</b> | World Class Manufacturing                         |
|                | <b>MEZ39</b> | Green Design and Manufacturing for Sustainability |
|                | <b>MEZ40</b> | Advances in Electric and Autonomous Vehicle       |

|  |                       |   |   |   |                   |                        |               |             |

| ME263  | Computational Methods | 2   | 1 | - | 3                 | 40                     | 60            | 100         |
| Prerequisite   | Nil.                  |   |   |   |                   |                        |               |             |
| Course Outcome   | CO1                   | Can apply various methods in matrix theory and iterative methods to solve system of linear equations.   |   |   |                   |                        |               |             |
|  | CO2                   | Can carry out linear and nonlinear regression analysis and can interpolate a dependent variable based on a given set of values by a suitable method |   |   |                   |                        |               |             |
|  | CO3                   | Can find integral value and differential coefficient based on a given set of values.  |   |   |                   |                        |               |             |
|  | CO4                   | Can solve initial value problem of ODE.   |   |   |                   |                        |               |             |
|  | CO5                   | Can solve boundary value problems of PDE.   |   |   |                   |                        |               |             |
| UNIT I   |                       |   |   |   |                   |                        |               | Periods : 9 |
| Matrix theory: Solution of Linear simultaneous equations – direct methods of solution – Gauss elimination method, Gauss Jordan method, Crout's method – iterative methods of solution – Jacobi's method, Gauss Seidal method. Cholesky decomposition - Generalized Eigenvectors - Canonical basis - QR factorization - Least squares method - Singular value decomposition Determination of Eigen value by iteration – Power method. |                       |   |   |   |                   |                        |               | CO1         |
| UNIT II  |                       |   |   |   |                   |                        |               | Periods : 9 |
| linear and nonlinear regression analysis– Method of least squares, fitting straight line, parabola and exponential, polynomial of degree N, applications.<br>Interpolation (Finite differences): Newton's Divided Difference Formula, Lagrange's Interpolation- Forward and Backward Difference Formula-Stirling's and Bessel's Central Difference Formula..   |                       |   |   |   |                   |                        |               | CO2         |
| UNIT III   |                       |   |   |   |                   |                        |               | Periods : 9 |
| Numerical Differentiation and Integration: Numerical Differentiation with interpolation polynomials, Numerical Integration by Trapezoidal Simpson's(both 1/3 and 3/8)rule, Double integrals using Trapezoidal and Simpson's rule Two point and three point Gaussian quadrature formulae.   |                       |   |   |   |                   |                        |               | CO3         |
| UNIT IV  |                       |   |   |   |                   |                        |               | Periods : 9 |
| Initial value problems for Ordinary Differential Equations: Single Step methods, Taylors Series, Euler and Modified Euler, Runge-Kutta methods of first and second order Differential equations, Multi Step methods, Milne and Adam's-Bashforth predictor and corrector method.  |                       |   |   |   |                   |                        |               | CO4         |
| UNIT V   |                       |   |   |   |                   |                        |               | Periods : 9 |
| Boundary Value Problems for ODE and PDE : Finite difference for the second order Ordinary Differential Equations, Finite Difference solutions for one dimensional heat equations(both Implicit and Explicit), One Dimensional wave equation, Two Dimensional, Laplace and Poisson Equation.  |                       |   |   |   |                   |                        |               | CO5         |
| Lecture Periods:45   | Tutorial Periods: -   | Practical Periods: -  |   |   | Total Periods: 45 |                        |               |             |

| Prerequisite  | Knowledge in matrix theory and differential calculus |   |          |          |                          |                               |           |            |
| <b>Course Outcome</b>   | <b>CO1</b>   | Understand engineering optimization, optimum design and know different optimization techniques available for use. Also, can employ numerical methods for finding optimum solution of a function having single variable and unconstrained optimization.  |          |          |                          |                               |           |            |
|   | <b>CO2</b>   | Can employ numerical methods for determining optimum solution for a function having multi-variable and unconstrained optimization problems with equality and inequality constraints.  |          |          |                          |                               |           |            |
|   | <b>CO3</b>   | Can employ numerical methods for determining optimum solution for a function having multi-variable and constrained optimization.  |          |          |                          |                               |           |            |
|   | <b>CO4</b>   | Can employ numerical methods for determining optimum solution for a multi-objective function having multi-variable and constrained optimization. Able to solve problems having mixed inequality constraints, discrete and continuous, linear and non-linear geometric, dynamic and integer programming. |          |          |                          |                               |           |            |
|   | <b>CO5</b>   | Able to use solution techniques for solving stochastic, linear and non-linear optimization problems using GA, SA and Ant Colony algorithms.   |          |          |                          |                               |           |            |
| <b>UNIT I</b>   |  |   |          |          |                          |                               |           |            |
| Introduction – Principles of optimization, Formulation of objective function, design constraints-classification of optimization problems. Single variable unconstraint optimization – Boundary phase method- Fibonacci search, method- Golden section search method – Newton – Raphson method.            |  |   |          |          |                          |                               |           | <b>CO1</b> |
| <b>UNIT II</b>  |  |   |          |          |                          |                               |           |            |
| Multi variable unconstraint optimization- classical method-Optimization with Equality and Inequality constraints- Simplex search method- Conjugate gradient method – Variable-metric method. (Applications of these techniques in Design and manufacturing problems)                                      |  |   |          |          |                          |                               |           | <b>CO2</b> |
| <b>UNIT III</b>   |  |   |          |          |                          |                               |           |            |
| Multi variable constraint optimization: Lagrange's multipliers - Kuhn-Tucker conditions – Penalty function method – Frank-Wolfe method– Generalized projection method. (Applications of these techniques in Design and manufacturing problems)  |  |   |          |          |                          |                               |           | <b>CO3</b> |
| <b>UNIT IV</b>  |  |   |          |          |                          |                               |           |            |
| Multi objective optimization: Conjugate gradient method - reduced Conjugate gradient method- Newton –Raphson method (Applications of these techniques in Design and manufacturing problems) Integer Programming – Branch and bound method, Introduction to Geometric programming and Dynamic programming. |  |   |          |          |                          |                               |           | <b>CO4</b> |
| <b>UNIT V</b>   |  |   |          |          |                          |                               |           |            |
| Stochastic method: Genetic algorithms (GAs): working principle – difference between GAs and traditional methods – GAs for constrained optimization – Simulated annealing- Ant colony algorithm.   |  |   |          |          |                          |                               |           | <b>CO5</b> |
| <b>Lecture Periods: 30</b>  | <b>Tutorial Periods: 15</b>                          | <b>Practical Periods: -</b>   |          |          | <b>Total Periods: 45</b> |                               |           |            |

| Students can take up small problems in the field of Product Design and Manufacturing as mini project. It can be related to solutions to engineering problem, verification and analysis of experimental data available, conducting experiments on various engineering subjects, material characterization, studying and applying a software tool for the solution of an engineering problems etc. This mini project work is evaluated by panel of examiners assigned by HoD. |                                 |   |                              |          |          |                               |    |            |  |  |  |  |  |  |  |

| The student individually works on a specific topic approved by the Head of the Department under the supervision of a faculty member who is conversant in that area of interest. The student can select a specific topic which is relevant to the area of product design and manufacturing which of current and the future needs of the country/society. They have to collect information related to the same through detailed review of literature and have to develop the methodology to solve the problem identified. The topic may be theoretical, modelling and simulation, experimental, fabrication type or case studies. At the end of the semester, after completing the work to the satisfaction of the supervisor and review committee, a detailed report should be submitted to the head of the department on clear definition of the identified problem, detailed literature review related to the area of work, methodology to be adopted and some initial work carried out. The students will be evaluated based on the report submitted and through a viva-voce examination by an internal and an external examiner. |                               |  |                               |   |           |                               |            |            |            |  |  |  |  |  |  |

| <b>UNIT I</b>  |                              |   |   |   |          |                               |           | <b>Periods :9</b> |
| Principles of Computer Graphics: Point plotting, drawing of lines, Bresenham's circle algorithm. Transformation in Graphics: co-ordinate system used in Graphics and windowing , view port, views, 2D transformations – rotation, scaling, translation, mirror, reflection and shear - homogeneous transformations – concatenation, 3D Transformation – Perspective Projection – Technique (Description of techniques only)  |                              |   |   |   |          |                               |           | <b>CO1</b>        |
| <b>UNIT II</b>   |                              |   |   |   |          |                               |           | <b>Periods :9</b> |
| Geometric Modeling: Classification of Geometric Modeling – Wire frame, Surface and Solid Modeling, applications – representation of curves and surfaces – Parametric form – Design of curved shapes- Cubic spline – Bezier curve – B-spline – Design of Surfaces - features of Surface Modeling Package - Solid Primitives, CSG, B-rep and description of other modeling techniques like Pure primitive instancing, cell decomposition, spatial occupancy enumeration, Boolean Operations (join, cut, intersection), Creating 3D objects from 2D profiles (extrusion, revolving etc)   |                              |   |   |   |          |                               |           | <b>CO2</b>        |
| <b>UNIT III</b>  |                              |   |   |   |          |                               |           | <b>Periods :9</b> |
| Assembly modeling - interferences of positions and orientation - tolerances analysis – mass property calculations - mechanism simulation. Graphics standard & Data storage: Standards for computer graphics GKS. Data exchange standards – IGES, STEP. Data structures for entity storage – Data structure for interactive modeling. Relational databases – introduction to SQL language, Role of OOPS in CAD.   |                              |   |   |   |          |                               |           | <b>CO3</b>        |
| <b>UNIT IV</b>   |                              |   |   |   |          |                               |           | <b>Periods :9</b> |
| Visual realism: Hidden – Line – Surface – solid removal algorithms shading – coloring. Introduction to parametric and variational geometry-based software's and their principles creation of prismatic and lofted parts using these packages- Feature based modeling. An overview of modeling software like PRO-E, CATIA, IDEAS, SOLID EDGE etc.   |                              |   |   |   |          |                               |           | <b>CO4</b>        |
| <b>UNIT V</b>  |                              |   |   |   |          |                               |           | <b>Periods :9</b> |
| Introduction to Finite Element Analysis – Steps of FEM for solving physical problem, conversions of physical model into FE model, CAD techniques to finite element data preparation- discretization techniques, Selection of elements, modelling with high and lower order elements- transition of element mesh, Mesh conditions to be satisfied for coarse- mesh regions- stress concentration regions, manual, semi-automatic and Automatic mesh generation- modeling of boundary and loading conditions, Application of symmetric and antisymmetric boundary conditions, Presentation of results - CAD applications of FEM , substructure modeling. |                              |   |   |   |          |                               |           | <b>CO5</b>        |
| <b>Lecture Periods: 45</b>   | <b>Tutorial Periods: -</b>   | <b>Practical Periods: -</b>   |   |   |          | <b>Total Periods: 45</b>      |           |                   |

| Inventory Control: inventory models - purchase model with instantaneous replenishment and without shortages, manufacturing model without shortages, purchase model with shortage and manufacturing model with shortages – operation of inventory systems – quantity discounts - P & Q systems of inventory replenishment – multiple item model with shortage limitation –determination of stock level of perishable items under probabilistic condition – MRP I and II. |  |   |   |   |          |                               |           | <b>CO3</b>         |
| <b>UNIT IV</b>  |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Concepts of Physical distribution – need, importance and management – Warehouses – location and layout types - receiving and shipping procedures - Application of OR techniques (Transportation problems only). Common carriers – Insurance coverage – Transportation documents – railway / lorry receipts – Bill of lading – clearing, forwarding and demurrage - evaluation of materials management performance – computers in materials management.                  |  |   |   |   |          |                               |           | <b>CO4</b>         |
| <b>UNIT V</b>   |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Creating the logistics vision – problems with conventional organizations – developing logistics organizations – need for integration – managing supply chain as a network – process integration and ECR – comakership and logistics partnerships – supplier development. New organizational paradigm – managing supply chain of the future – role of information in the virtual supply chain – route map to integrated supply chain.                                    |  |   |   |   |          |                               |           | <b>CO5</b>         |
| <b>Lecture Periods: 45</b>  | <b>Tutorial Periods: -</b>             | <b>Practical Periods: -</b>   |   |   |          | <b>Total Periods: 45</b>      |           |                    |

| Prerequisite  | <b>Nil.</b>                    |  |   |   |          |                               |            |                    |
| Course Outcome  | <b>CO1</b>                     | Describe surface topography, physico-chemical aspects of solid surfaces and surface interactions. Analysis of surface roughness- Measurement of surface roughness- Measurement of real area of contact.  |   |   |          |                               |            |                    |
|   | <b>CO2</b>                     | Recognize the laws of friction, mechanisms of friction, stick slip and surface temperature.  |   |   |          |                               |            |                    |
|   | <b>CO3</b>                     | Appreciate the various modes of wear: adhesive, delamination, fretting, abrasive, erosive, corrosive, oxidational (mild and severe), melt, and the wear-mechanism maps.  |   |   |          |                               |            |                    |
|   | <b>CO4</b>                     | Identify types of lubrication: boundary, solid-film, hydrodynamic, and hydrostatic lubrication. Analysis of hydrodynamic and hydrostatic lubrication with problems. Examine applications/case studies: sliding contacts, rolling contacts, bearing design, bearing selection, lubrication and mountings. |   |   |          |                               |            |                    |
|   | <b>CO5</b>                     | Understand and identify the different types of coatings for industrial engineering components. To know about the latest coating techniques.  |   |   |          |                               |            |                    |
| <b>UNIT I</b>   |                                |  |   |   |          |                               |            | <b>Periods : 9</b> |
| Introduction to tribology-Factors influencing Tribological phenomena-Engineering surfaces Surface characterization, Computation of surface parameters. Surface measurement techniques Apparent and real area of contact. Introduction to nano tribology.  |                                |  |   |   |          |                               | <b>CO1</b> |                    |
| <b>UNIT II</b>  |                                |  |   |   |          |                               |            | <b>Periods : 9</b> |
| Genesis of friction-Various laws and theory of friction-friction in contacting rough surfaces sliding and Rolling friction-frictional heating and temperature rise.   |                                |  |   |   |          |                               | <b>CO2</b> |                    |
| <b>UNIT III</b>   |                                |  |   |   |          |                               |            | <b>Periods : 9</b> |
| Wear and wear types-Mechanisms of wear - Adhesive, abrasive, corrosive, erosion, fatigue, fretting, etc., -Wear of metals and non-metals- Wear models – wear maps-wear damage.  |                                |  |   |   |          |                               | <b>CO3</b> |                    |
| <b>UNIT IV</b>  |                                |  |   |   |          |                               |            | <b>Periods : 9</b> |
| Introduction to lubrication-Lubrication regimes-Thick Film, Mixed, Boundary – Hydrodynamic Journal and Thrust Bearings- General Reynolds equation- Various mechanisms of pressure development in oil film-Performance parameters. Design of hydrodynamically lubricated bearings using Raimondi-Boyd charts. Composition and properties of lubricant, Evaluation and testing of lubricants. |                                |  |   |   |          |                               | <b>CO4</b> |                    |
| <b>UNIT V</b>   |                                |  |   |   |          |                               |            | <b>Periods : 9</b> |
| Surface modification techniques-Improving wear resistance-Surface coating techniques such as electrochemical depositions, anodizing, thermal spraying, Chemical Vapour Deposition (CVD),Physical Vapour Deposition (PVD), etc. and their applications.  |                                |  |   |   |          |                               | <b>CO5</b> |                    |
| <b>Lecture Periods: 45</b>  | <b>Tutorial Periods: -</b>     | <b>Practical Periods: -</b>  |   |   |          | <b>Total Periods: 45</b>      |            |                    |

|   | <b>CO5</b>                                   | shall be able to establish a trusting relationship with the partners and resolve conflicts, if any                        |   |   |          |                               |           |                    |
| <b>UNIT I</b>   |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Logistics and Competitive Strategy: Competitive advantage – gaining competitive advantage through logistics – mission of logistics management – supply chain and competitive performance – changing logistics environment. Customer Service Dimension: marketing and logistics interface – customer service and customer retention – service driven logistics systems – setting customer service priorities – setting service standards.  |  |   |   |   |          |                               |           | <b>CO1</b>         |
| <b>UNIT II</b>  |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Measuring Logistics Cost and Performance: concept of total cost analysis – principles of logistics costing – logistics and the bottom line – logistics and shareholder value – customer profitability analysis – direct product profitability – cost drivers and activity-based costing. Benchmarking the Supply Chain: benchmarking the logistics process – mapping supply chain processes – supplier and distribution benchmarking – setting benchmarking priorities – identifying logistics performance indicators. Managing the global pipeline: trend towards globalization in the supply chain – challenge of global logistics - organizing for global logistics. |  |   |   |   |          |                               |           | <b>CO2</b>         |
| <b>UNIT III</b>   |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Strategic Lead-Time Management: time based competition – concept of lead-time – logistics pipeline management – logistics value engineering – lead-time gap. Just-in-time and Quick Response Logistics – Japanese philosophy – implications for logistics –quick response logistics – vendor managed inventory – logistics information systems – logistics systems dynamics – production strategies for quick response.   |  |   |   |   |          |                               |           | <b>CO3</b>         |
| <b>UNIT IV</b>  |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Managing the Supply Chain: creating logistics vision – problems with conventional organizations – developing logistics organizations - logistics as a vehicle for change – need for integration – managing supply chain as a network – process integration and ECR – co-makership and logistics partnerships – supplier development. Role of Information Systems and Technology in SCM : importance of information in an integrated SCM environment – inter organisational information systems (IOIS) – information requirements determination for a supply chain IOIS – information and technology applications of SCM.  |  |   |   |   |          |                               |           | <b>CO4</b>         |
| <b>UNIT V</b>   |  |   |   |   |          |                               |           | <b>Periods : 9</b> |
| Developing and Maintaining Supply Chain Relationships: conceptual model of alliance development – developing a trusting relationship with partners in supply chain – resolving conflicts in supply chain relationship. Cases in SCM. - Future Challenges in SCM: greening of supply chain – design for SCM – intelligent information systems.   |  |   |   |   |          |                               |           | <b>CO5</b>         |
| <b>Lecture Periods: 45</b>  | <b>Tutorial Periods: -</b>                   | <b>Practical Periods: -</b>   |   |   |          | <b>Total Periods: 45</b>      |           |                    |

| <b>MEZ33</b>   | <b>Computer Aided Inspection And Quality Control</b> | <b>3</b>  | - | - | <b>3</b>                 | <b>40</b>                     | <b>60</b> | <b>100</b>         |
| Prerequisite   | <b>Nil.</b>  |   |   |   |                          |                               |           |                    |
| Course Outcome   | <b>CO1</b>   | Knowledge on Quality Management system and its mandatory requirements, standards and procedures. Quality control by inspection methods                        |   |   |                          |                               |           |                    |
|  | <b>CO2</b>   | In depth view of sophisticated inspection methods and its relevant benefits by reducing rejection rate of the produce.  |   |   |                          |                               |           |                    |
|  | <b>CO3</b>   | Advanced Measuring methods to calibrate dimensions and deviation as per specifications  |   |   |                          |                               |           |                    |
|  | <b>CO4</b>   | Usage of lasers. Interfacing computers in machine tools testing, inspection and assessment of Quality Assurance for the product or service                    |   |   |                          |                               |           |                    |
|  | <b>CO5</b>   | Knowledge on contemporary quality measurement techniques for product improvement and development. Also the advent of computers in quality control estimation. |   |   |                          |                               |           |                    |
| <b>UNIT I</b>  |  |   |   |   |                          |                               |           | <b>Periods : 9</b> |
| Quality – definition- Traditional and modern QC – ISO 9000 and ISO 14000 standards- CAQC Software required- Automatic Inspection: Inspection Fundamentals – Sampling versus 100% inspection - Contact Inspection techniques: CMM –Types- construction, operation and programming – software- applications and benefits- Flexible Inspection systems- Inspection probes on machine tools- Automatic shaft inspection. |  |   |   |   |                          |                               |           | <b>CO1</b>         |
| <b>UNIT II</b>   |  |   |   |   |                          |                               |           | <b>Periods : 9</b> |
| Machine Vision, Image Processing and its Application in Inspection-optical inspection – Linear Array Devices, Optical Triangulation Techniques - Non-Contact Sensors For Surface Finish Measurements- non contact non optical inspection technologies- Electrical field- radiation techniques- ultrasonic methods.   |  |   |   |   |                          |                               |           | <b>CO2</b>         |
| <b>UNIT III</b>  |  |   |   |   |                          |                               |           | <b>Periods : 9</b> |
| Optical projection comparator- Bosch and lamp projector – laser viewer for production profile checks- optoelectronic dimensional gauging, operations and applications- co-ordinate measuring robots- process control robot digital height gauge with SPC- air gauging with electronic sensors.   |  |   |   |   |                          |                               |           | <b>CO3</b>         |
| <b>UNIT IV</b>   |  |   |   |   |                          |                               |           | <b>Periods : 9</b> |
| Laser Interferometer, Speckle Measurements, Laser Scanning Systems- - Testing of Machine Tools Using Laser Interferometer- Robotic gauging and inspection systems- expert knowledge based real time inspection system. Computer Aided Quality Assurance Records- Calibration Control -Automatic Quality Data Acquisition.  |  |   |   |   |                          |                               |           | <b>CO4</b>         |
| <b>UNIT V</b>  |  |   |   |   |                          |                               |           | <b>Periods : 9</b> |
| Computer Aided Quality Control–Objectives of CAQC- Computers in QC- CAQC Charts for Attributes and Variables – Study of CAQC Software like STAT- Introduction to six sigma - $6\sigma$ Methods and Tools - $6\sigma$ for manufacturing – $6\sigma$ for product development.  |  |   |   |   |                          |                               |           | <b>CO5</b>         |
| <b>Lecture Periods: 45</b>   | <b>Tutorial Periods: -</b>                           | <b>Practical Periods: -</b>   |   |   | <b>Total Periods: 45</b> |                               |           |                    |

| Course Outcome  | <b>CO1</b>                 | Can get knowledge about manual, mechanical and automated systems.   |   |   |                               |               |            |            |
|   | <b>CO2</b>                 | Understand the importance of ergonomics and can apply in the design of new products.  |   |   |                               |               |            |            |
|   | <b>CO3</b>                 | Can carry out environmental friendly design.  |   |   |                               |               |            |            |
|   | <b>CO4</b>                 | Can gain knowledge on the effect of biomechanics, bio thermodynamics, bioenergetics on the design and development of new products |   |   |                               |               |            |            |
|   | <b>CO5</b>                 | Can do information processing and can understand the effects of other human factors.  |   |   |                               |               |            |            |
| <b>UNIT I</b>   |                            |   |   |   |                               |               |            |            |
| Introduction- Definition – Human & Machine system – Manual; Mechanical; Automated system, Input of Information - Auditory, Visual, Oral, Olfactory display & Communication. Human Output and Control – Physical work, Manual material handling, Physiological performance: Motor Skill, human control of systems, controls & data entry devices, hand tools & devices.  |                            |   |   |   |                               |               | <b>CO1</b> |            |
| <b>UNIT II</b>  |                            |   |   |   |                               |               |            |            |
| Work place and equipment design- Applied anthropometry, Workspace design and seating, arrangement of components within a physical space, interpersonal aspects of work place design, and design of repetitive task, design of manual handling activity task, work capacity, stress, and fatigue. Design of Equipment: Ergonomic factors to be considered in the design of displays and control, design for maintainability, design of human computer interaction.   |                            |   |   |   |                               |               | <b>CO2</b> |            |
| <b>UNIT III</b>   |                            |   |   |   |                               |               |            |            |
| Environmental design: Vision and illumination design – Climate, Noise, Motion, Sound, and Vibration.  |                            |   |   |   |                               |               | <b>CO3</b> |            |
| <b>UNIT IV</b>  |                            |   |   |   |                               |               |            |            |
| Biomechanics, bio thermodynamics, bioenergetics: Biostatic mechanics, statics of rigid bodies, upper extremity of hand, lower extremity and foot, bending, lifting and carrying, biodynamic mechanics, human body kinematics, kinetics, impact and collision, human activity analysis, ergonomic tools, RULA, REBA, NOISH lifting equation – Bio thermal fundamentals, human operator heat transfer, human system bioenergetics, thermoregulatory physiology, human operator thermo regularity, passive operator, active operator, heat stress. |                            |   |   |   |                               |               | <b>CO4</b> |            |
| <b>UNIT V</b>   |                            |   |   |   |                               |               |            |            |
| Cognitive ergonomics & human factor application: Information Theory Information processing, Signal detection theory, Human response, human errors, cognitive task analysis. Human factors applications: Human error, accidents, human factors and the automobile, organizational and social aspects, steps according to ISO.DIS6385, OSHA's approach, virtual environments  |                            |   |   |   |                               |               | <b>CO5</b> |            |
| <b>Lecture Periods: 45</b>  | <b>Tutorial Periods: -</b> | <b>Practical Periods: -</b>   |   |   | <b>Total Periods: 45</b>      |               |            |            |
